

Geography - Weather

Overview

- Seasons are different times in the year when there are weather changes.
- In places in the UK, there are four seasons in a year.
- The seasons have an effect on length of days, landscapes, plants and animals

The Four Seasons

<p style="text-align: center;">Spring</p> <p>In spring, the weather starts to get warmer after winter.</p> <p>Lots of baby animals are born and new flowers blossom</p> <p>It takes place in March, April and May</p>	<p style="text-align: center;">Summer</p> <p>Summer is the warmest season of the year.</p> <p>Insects such as wasps and bees are around and plants have lots of leaves.</p> <p>The summer months are June, July and August</p>
<p style="text-align: center;">Autumn</p> <p>In Autumn, the weather starts to get cooler after summer.</p> <p>Many types of leaves begin to turn brown and fall from trees.</p> <p>Autumn is September, October and November</p>	<p style="text-align: center;">Winter</p> <p>Winter is the coldest season of the year.</p> <p>Many trees have no leaves and many animals are hibernating.</p> <p>Winter is December, January and February.</p>
