Native wild-life Animals that are found specifically in a place/		the area.
	Native wild-life	Animals that are found specifically in a place/

-Australia is located on the continent Australasia in the southern hemisphere of the world.

Knowledge

-Like the UK, Australia is surrounded by water making it an island. However its population is only 24 million which is 3x smaller than the UK.

-The climate is reversed in Australia meaning that you can experience hot sunny weather in the winter.

-Australia has some fantastic world wonders such as the Great Barrier Reef that requires protecting due to the climate changing. The bushfire caused by hot temperatures have also caused lots of problems for animals and the rainforests.
