

LIVING THINGS and their habitats

Assessment question: Can I describe, draw and label a habitat with some plants and animals that live in it?

Overview

-All around us, there are some things that are alive, some things that are dead, and some things that have never been alive.

-All living things have certain characteristics that help to keep them alive and healthy.

-Living things live in habitats that suit them, and which provide for their basic needs.

-Living things depend on other living things in order to survive.

Food Chains

-Every living thing needs food in order to create energy. This process is called nutrition.

-Therefore, living things depend upon one another to live.

Habitats

-A habitat is a home environment for plants, animals, and other living things.

-Examples of habitats include:

- Desert; Rainforest;
- Woodland; Ocean;
- Meadow; Seashore.

-Micro-habitats are small, specific home environments, e.g. individual trees, a pond, under a rock, or a pile of logs.

-Habitats contain features that make them suitable to the things that live there, e.g., food, shelter, or temperature.

-Habitats can change over the year & over time, so some animals migrate.

Alive

Lion

Oak Tree

Dead

Fallen Leaves

Bone

Never Been Alive

Phone

Lamp Post
